Data Summary

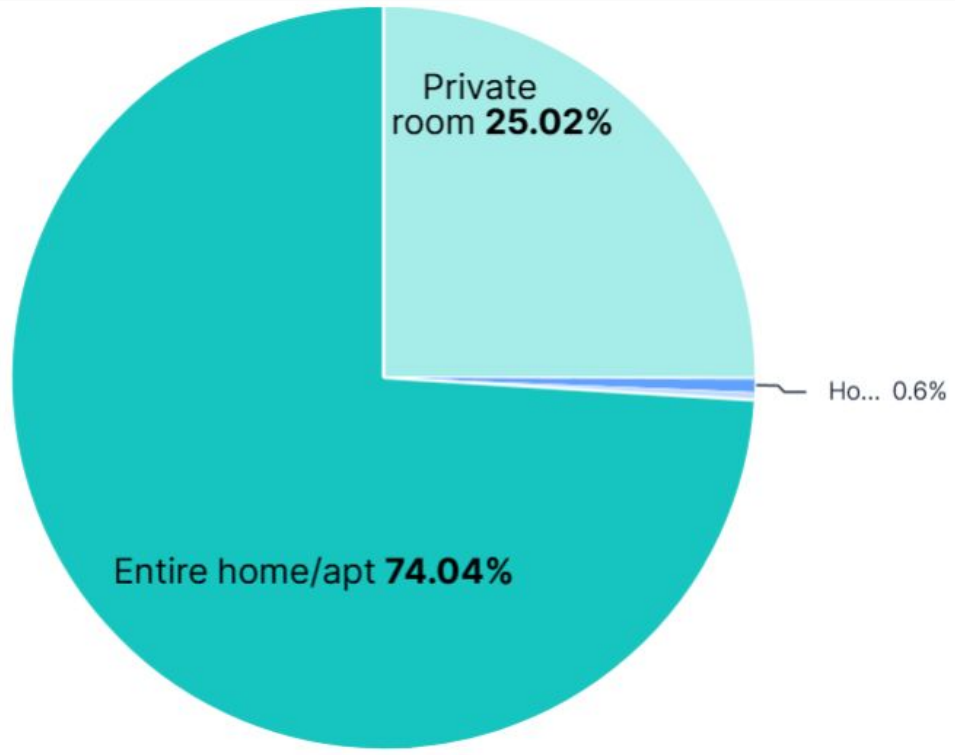
- Airbnb Listings
- 10 major cities
- price, coordinates, host, availability, etc.

Main Question

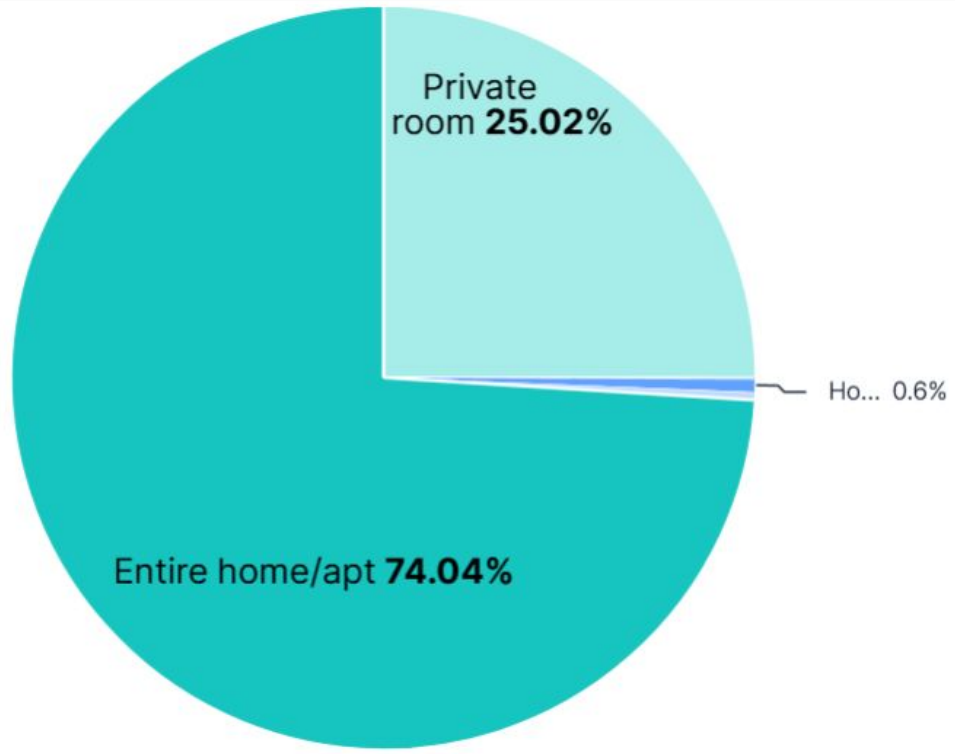
What is the most favored type of Airbnb?

Data Analysis using ES: Pie Chart



- Availability & Room Type
- Entire Home / Apt. with the most availability
- Hotel with the least availability

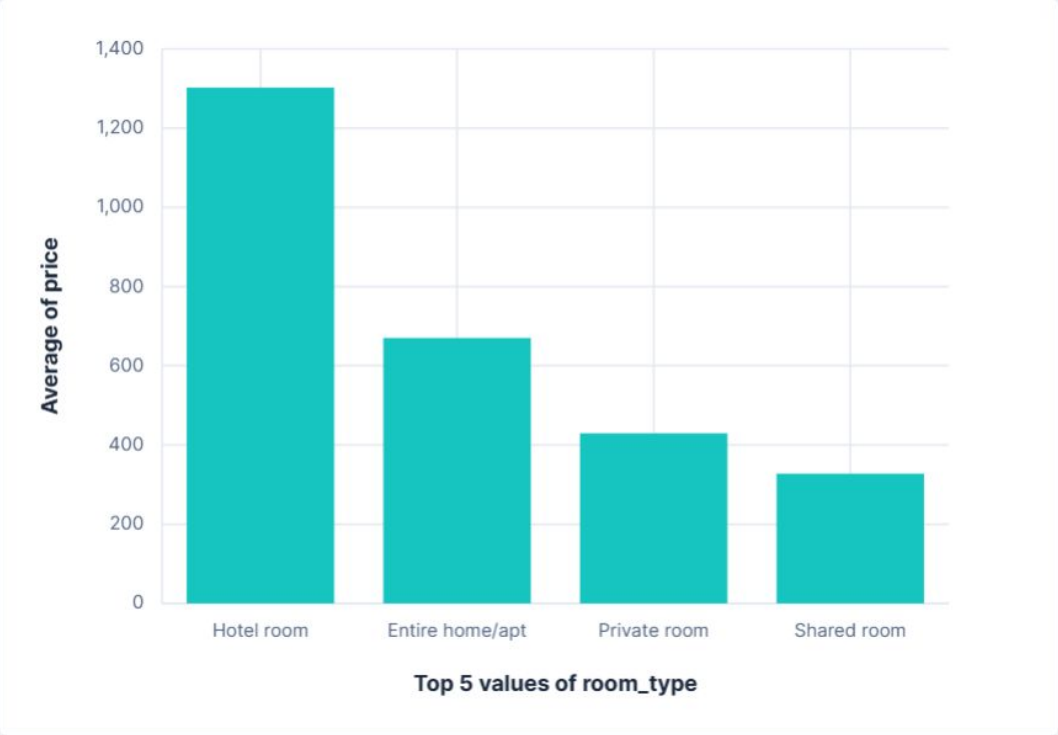
Data Analysis using ES: Pie Chart



Reason:

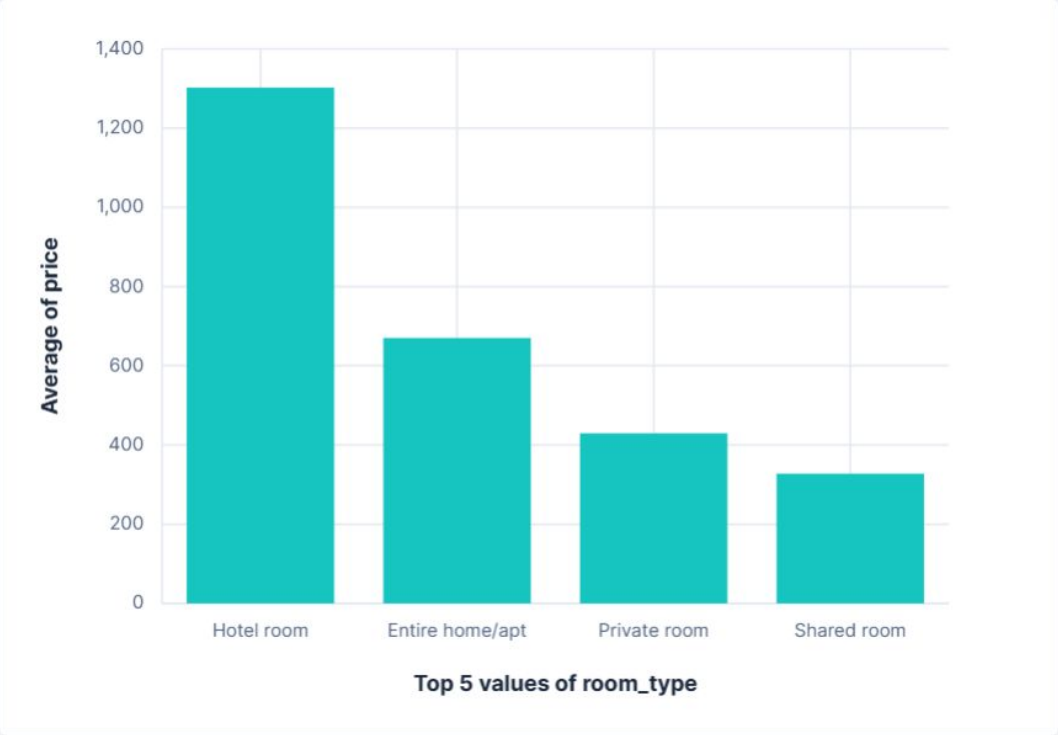
- Tourists & business people go to cities.
- Cities = more apartments
- Hotels are limited

Data Analysis using ES: Bar Chart



- Room Type and Price
- Hotels are the most expensive.
- Avg Price is $1,300

Data Analysis using ES: Bar Chart

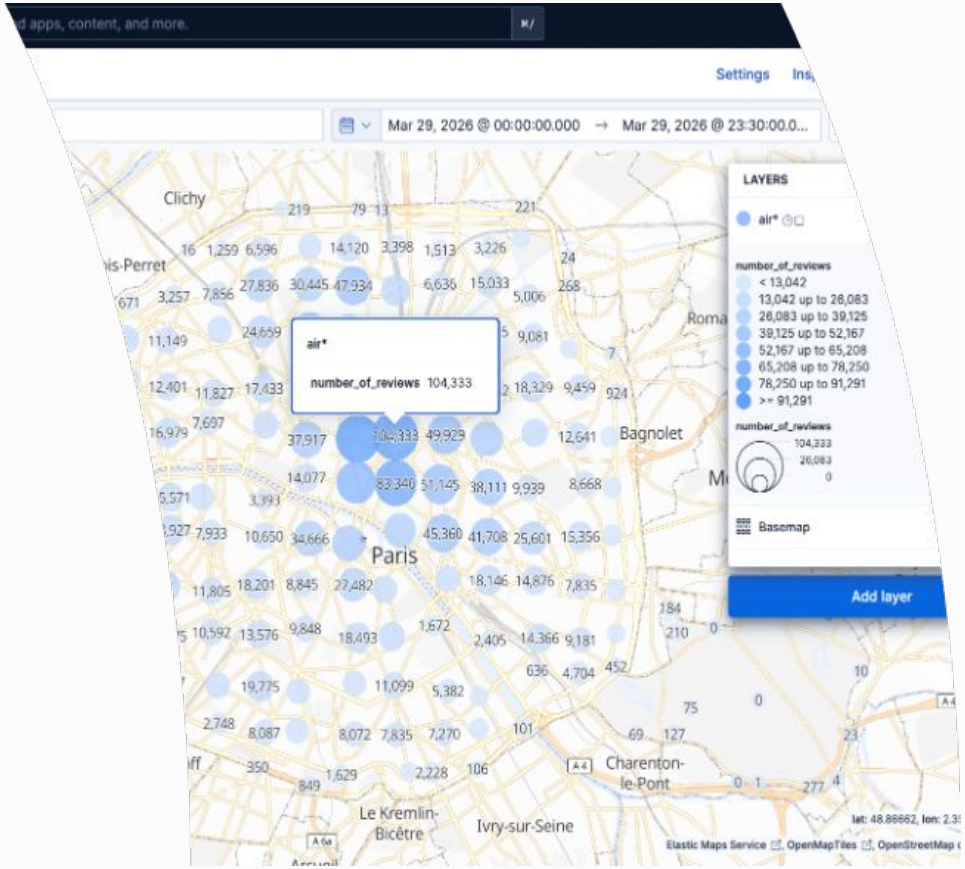


Reason:

- Tourism
- Hotel booking sites i.e. Trivago and Booking.com

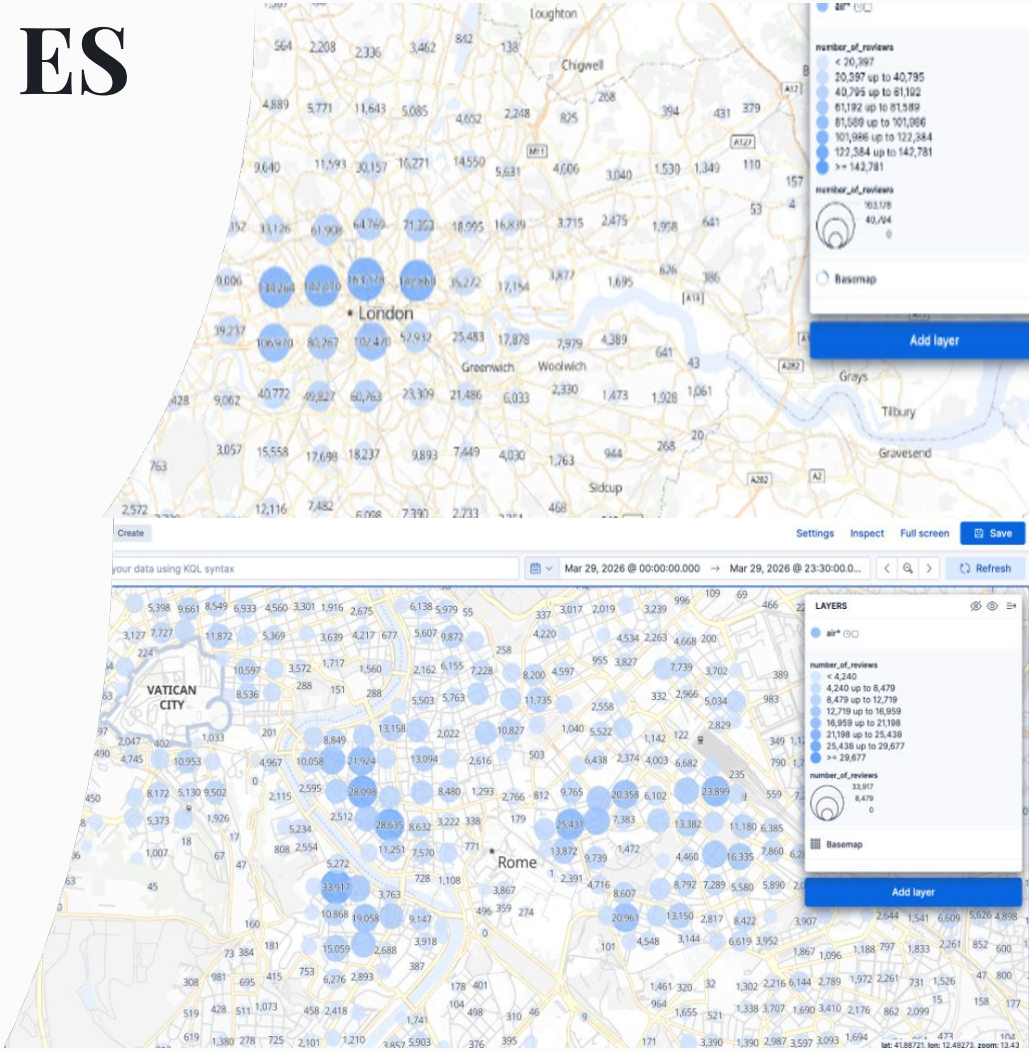
Data Analysis using ES

- Number of reviews by location
- Each point represents review activity
- Higher activity in the center of the city

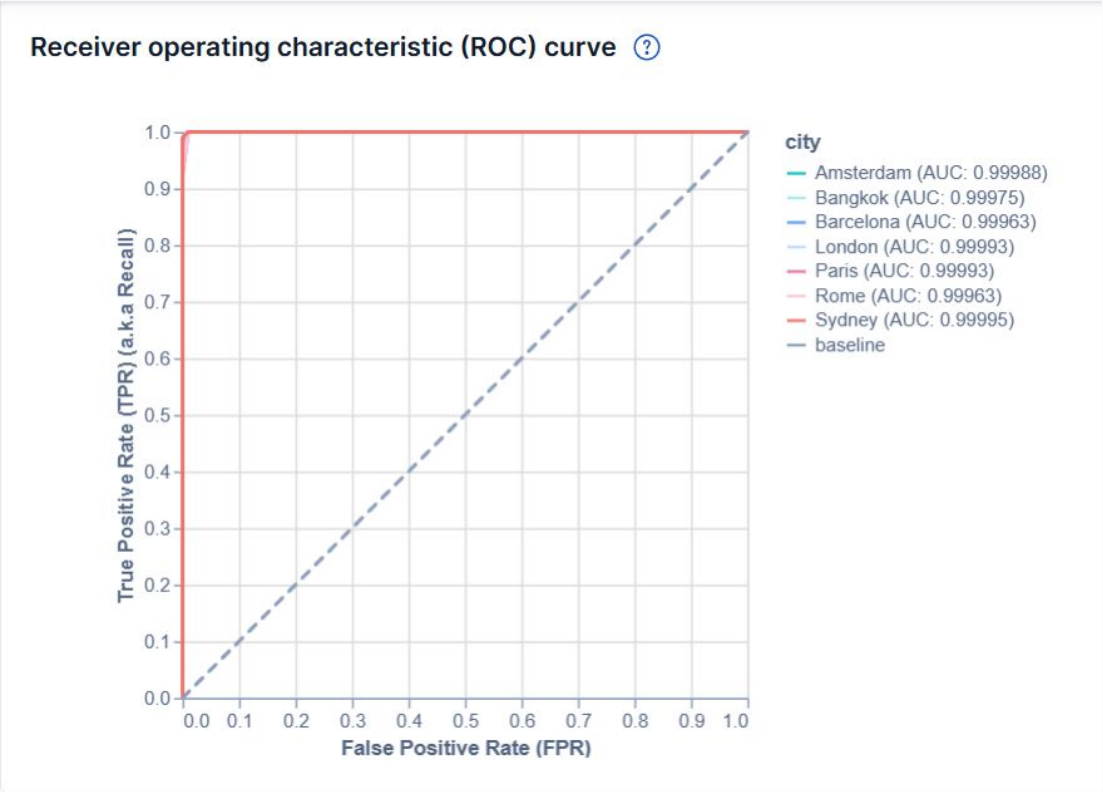


Data Analysis using ES

- Lower activity further from the center of the city
- More reviews show that there is a higher demand
- Location influences booking activity



Predictive Analysis using Machine Learning



- Classification: City
- Notable Location or Geographic Location
- AUC 1.0 = Likely be a positive example

Conclusion

What is the most favored type of Airbnb?

- Entire house / apts are the most preferred
- Hotels are the most expensive
